The name AutoCAD Product Key originally came from the first letters of the company's first two founders, and the first released version of the product: A1D. It was originally developed for a joint venture between the AutoDesk organization, founded by students of the Massachusetts Institute of Technology (MIT) Media Lab, and the Xerox Corporation. If you are using a Mac or Linux operating system, then you can download a free trial version of AutoCAD via the Internet and try it out. Who is AutoCAD for? ## What's New In?

Assist drawing with comments and edits. After adding an annotation, the drawing automatically redraws your annotation and applies it to the drawing. (video: 5:19 min.)

Closing & Sorting: Add automatic line, polyline and spline corners. Use closed loops to connect line, polyline and spline corners and automatically add line, polyline and spline edges. (video: 2:29 min.) Change entities of an entity set and move them around. By simply applying the change, you can move an entity within an entity set, and a selection of other entities around the entity. (video: 1:59 min.)

Edit entities with the Change entity editor (ChE). Before starting an edit, you can preview how it will affect the entities. (video:

---

3:45 min.) Create entities with the Edit entity tool and Polyline tool: Use the Edit entity tool to create editing entities, which can be used to select entities and modify their properties and parameters. When finished editing, you can move the entities to a different entity set. The Polyline tool can also create editing entities. You can create multiple edges or faces between two points with the Polyline tool. (video: 5:28 min.) Use the Deconstruct entity tool to decompose a line or polyline, and the Combine entity tool to reassemble a line or polyline. The Combine entity tool can also combine multiple polygons or edges together to make a single polyline or line. (video: 2:36 min.) Draw & Link: Quickly connect entities to each other to draw the path between them. Start drawing a line or polyline, and a connection line automatically appears between the two entities. You can even insert an entity

---

between two entities. (video: 5:57 min.) Link objects by double-clicking a point or line, and select objects by double-clicking an object's boundary or bounding box. You can also link objects by using the Link tool, which enables you to drag and drop objects to connect them to one another. (video: 4:53 min.) Draw new objects by dragging and dropping. With the new, built-in tool, you can click and drag to draw. The object will appear at the point of dragging, and the shape fills automatically. (video: 3:38 min.) Navigation & Z
